Dockerfile:

Docker can build images automatically by reading the instruction from a Dockerfile. A Dockerfile is a text document that contains all the commands a user could call on the command line to assemble an image.

SYNTAX:

INSTRUCTION argument

↓

It must be in uppercase.

- FROM → Create a new build stage from a base image
- RUN
- CMD
- COPY

FROM httpd:latest

RUN apt update

COPY index.html /usr/local/apache2/htdocs/

notepad index.html

Bridge

None

Host
